The aim of UTW is to guide children to make sense of their physical world and their community

The baseball experiment

- Strong readers;
- Children with good knowledge of baseball;
- It made no difference?

Recht and Leslie found that reading ability had little impact on how well children understood the story. But knowledge of baseball did. In fact, those who were weaker readers did as well as strong readers if they had knowledge of baseball.

“Prior knowledge creates a scaffolding for information,” explains Recht. “For poor readers, the scaffolding allows them to compensate for their generally inefficient recognition of important ideas.”

Why?
